profoundly changing global  
research assessment

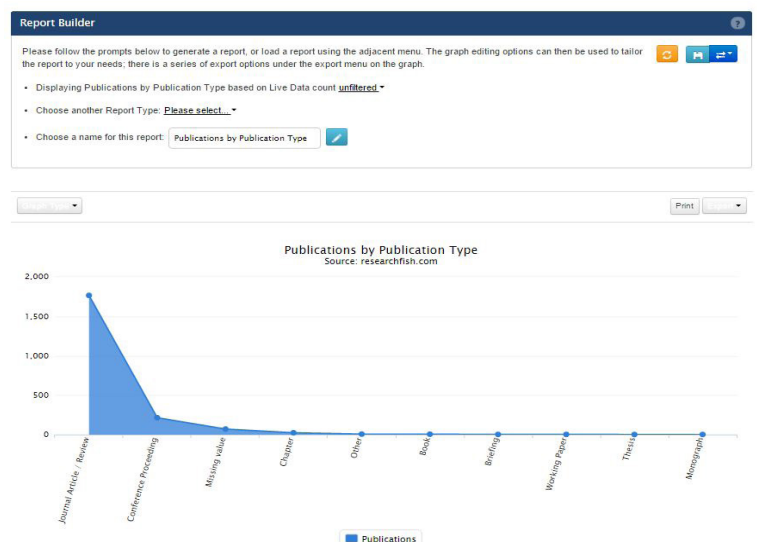

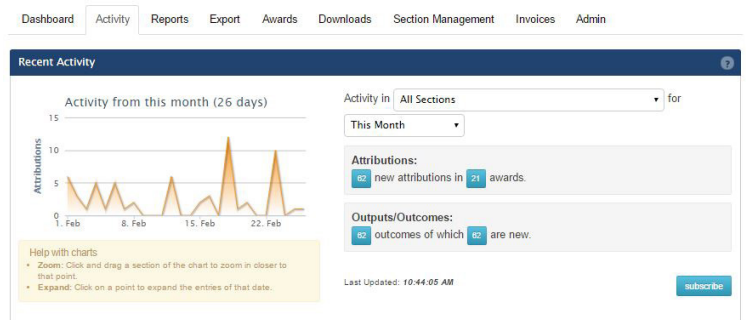

# Reporting Services

We profoundly believe in changing the way that global research is assessed to enable better research decisions to be made.

Researchfish gives you a broader and deeper understanding of the activities of your funded research through the reporting functionality which enables you to instantly generate a comprehensive set of standard reports.

Researchfish enables funders to view and subscribe to real-time updates to outcomes as they are attributed by researchers in receipt of funding, giving them the ability to keep track of researchers' progress. Funders can also export all raw data reported into Researchfish, to enable more detailed analysis to be carried out.

Our system generated reports are advanced in their design and incorporate methodology, funder branding and customisable text. These reports can also combine multiple tables and charts in the same report and are made available as one-click reports that are very easy to use. These reports can be downloaded as PDF files which makes them ideal for printing as well as sharing offline.

Such reports can be used to strengthen the evidence base funders have to draw upon for public accountability and Government spending reviews, make the case for public investment in research, evaluate progress, and better understand the research system.

“ the data collected — both qualitative and quantitative — is invaluable to the Medical Research Council and is used in a multitude of ways ”

Whilst the system generated reports will give many funders all the information they need, it has been recognised that assessment of this data and reporting on the findings, can prove challenging for some funders. If you require support or advanced reporting, our highly experienced strategic team can offer a set of services to work directly with you to meet your exact requirements.

Our bespoke consultancy services\* can support funders to best interpret, evaluate and apply your data to inform evaluation and strategy development and to enable better research decisions to be made.

We can offer you support with interpretation of your results and preparation of analysis for the writing of narratives, case studies and inspiring stories which are in line with your overall business objectives.

For some examples of how the reports produced from Researchfish are used go to [www.researchfish.com/why-report](http://www.researchfish.com/why-report)
